Electrical Insulation  
Wiring Harnesses  
Corrosion Protection

Sealing Connections & Fittings

Waterproofing

Rigging Applications

Whipping Rope Ends

Marking Lines & Chain

Emergency O-Rings & Seals

Tool Handles & Grips

Almost Anything!

## INSTRUCTIONS FOR USE:

- 1.) Wrap Rescue Tape around project by stretching and overlapping onto itself. Stretch at least double to ensure the best fusion. For high pressure leaks, stretch to the maximum amount. Rescue Tape works on either side. The tighter Rescue Tape is wrapped, the quicker and stronger the bond.
- 2.) Continue overlapping Rescue Tape onto itself by 50% so that 1/2 the width is covered by the next wrap. The first and last wrap should completely overlap onto itself. Most repairs can be made by wrapping 3 to 5 layers thick and wrapping 3 to 5 inches (8-12cm) on both sides of the repair. For high pressure leaks, additional layers may be necessary to add strength.
- 3.) Rescue Tape begins fusing immediately and is not reusable. For best results, do not attempt to reposition Rescue Tape after the fusing process begins.

Each Roll: 1" Wide X 12' Long X .020"  
2.54 cm Wide X 3.66 m Long X .5 mm  
Available in numerous colors and sizes.
